

1. Costa Rica, Belgium and Denmark
 2. Korea, Japan, Chile
 3. Costa Rica may have succeeded in achieving a low gender wage gap by developing a Guide to Gender-Sensitive Labour Inspection, which includes guidelines to help inspectors identify pay equity violations. This strategy strengthens the oversight capacity of labour ministries to ensure compliance with the laws.
 4. Isopropanol sales increase rapidly from around 50 US CTS/lbs to around 120 US CTS/lbs
 5. The possible reason for this observation is the COVID-19 pandemic, with populations buying a very large amount of hand sanitiser, Isopropanol being the main ingredient.
 - 6.
- Africa: a majority of countries have a linear relationship between CO2 emission per person and GDP per capita.
- Americas: overall a linear relationship between CO2 emission per person and GDP per capita for countries with a smaller population but countries with larger populations the emissions per person doesn't increase much as GDP per capita increases.
- Asia: for many countries with low populations there doesn't to be a relation between emission and GDP. In countries with larger populations emissions do not increase as severely as other continents' when GDP increases.
- Europe: around half of the countries' emissions do not increase with GDP, and the rest's emissions increase steadily with GDP.
- Oceania: emissions increase steadily with GDP.
